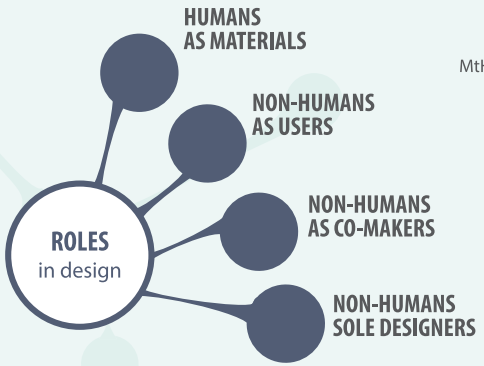
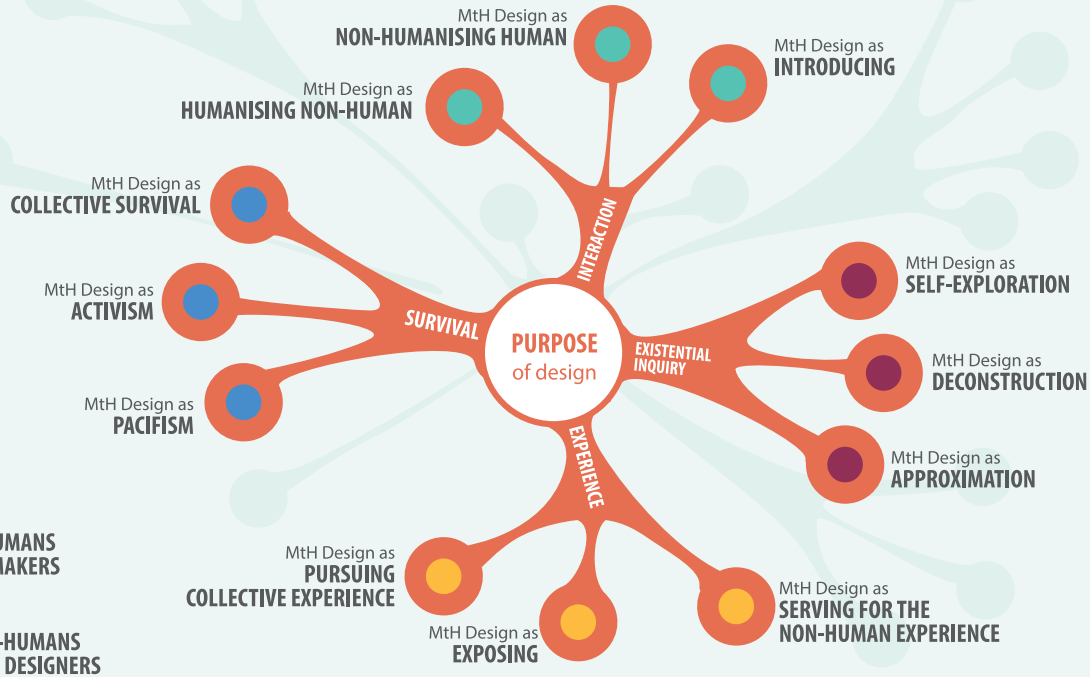
PLAY BIO Designing for More-than-Human Relations in Everyday Life





WHAT ARE SHROOM CARDS?

Much of today's design still puts human needs, goals, and perspectives at the center—often ignoring the many other beings we share the world with and our inter-dependence with them for thriving together. More-than-Human (MtH) design challenges this by asking us to see animals, plants, fungi, and even technologies not as resources, but as beings we are deeply connected with—beings that shape us.

The Shroom Cards is a set of design cards that aims to help us explore this shift by encouraging us to reflect on the MtH relationalities in design practice. By concretising a set of relationalities (e.g., role and purpose cards) and leaving space for articulation of other perspectives (e.g., through empty relationality cards), Shroom Cards present initial starting points to articulate, reflect, and act on different relationalities in MtH design in practice. It is developed by researchers affiliated with *Gameful Futures Lab (Research Center of Gameful Realities, Tampere University, Finland)*, as part of ongoing research, focusing on understanding MtH design in practice.

You can check out the prior work that led to the design of Shroom Cards below:

Genç, Ç., Altarriba Bertran, F., Buruk, O. O., Jung, S., Spors, V., & Hamari, J. (2025, October). Exploring Roles and Purposes in More-than-Human Design through a Reflexive Design Studio Experiment. In *Proceedings of the 28th International Academic Mindtrek Conference*.

Genç, Ç., Altarriba Bertran, F., Buruk, O. O., Jung, S., Spors, V., & Hamari, J. (2024, October). Shroom Cards: Playful Exploration of Human Positionalities for More-than-Human Design. In *Companion Proceedings of the 2024 Annual Symposium on Computer-Human Interaction in Play* (pp. 97-103).

WHAT TO USE THEM FOR?

Shroom Cards Kit ultimately aims to help individuals reflect on, articulate, and act on different relationalities that are possible in MtH design practice. As such, the audience of this kit is anyone who is interested in practicing design from MtH perspectives. Those individuals can use the cards for three interconnected aims:

(1) **Ideation** through MtH relationalities:

The kit aims to provide concrete and provocative starting points (e.g., "role" and "purpose" cards) to act on different relationalities possible in design practice. This might be especially handy for, but not limited to, individuals who are not knowledgeable or experienced with MtH design. Individuals can use the cards to create design ideas from the perspectives illustrated on them.

(2) **Reflection** on MtH relationalities:

This kit aims to provide starting points and a structure for reflection on MtH design practices. Individuals can use the "role" and "purpose" cards to reflect on existing designs and experiences.

(3) **Concretising other** MtH relationalities:

The cards do not and will not ever cover all the unique relationalities in MtH design practice. They are also there to be criticised, contested, and expanded. The "Empty Relationality" cards aim to give that space to individuals to create new relationalities that they've encountered but that are not represented in the role and purpose cards

WHAT DO THEY INCLUDE?

The kit includes a set of **role** and **purpose** cards drawn from MtH design practices, illustrating a variety of relationalities possible in MtH design, **empty relationality cards** to extend the kit with new relationalities based on individuals' own design practices, and **non-human cards** that aim to help individuals get to know and look at their practices from the perspectives of the non-humans they are designing with.

Role Cards x 4

The role cards describe different relationalities of how humans and non-humans are involved in design processes

Empty Relationality Cards

Empty Relationality cards invite you to create new relationalities when there is no card illustrating a perspective you have experienced.

Non-human Cards

Non-Human cards invite you to get to know non-humans by engaging with them and creating a non-human character related to your design context. The card will also guide a role-play session, helping players explore the world through the senses, needs, and values of their chosen non-human.

Purpose Cards x 12

The purpose cards describe goals that an MtH design might target. Purposes are presented in four subcategories (below).

Survival *subcategory examines how designs might be shaped by their anticipated practical benefits for humans and/or non-humans.*

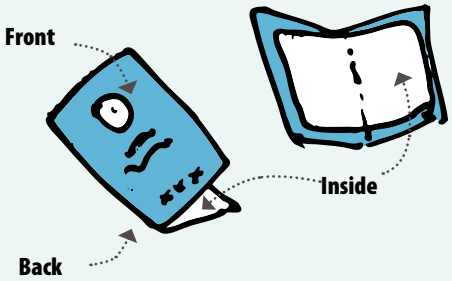
Experience *subcategory offers a range of perspectives on the kinds of experiences that designs can target in the context of designing with or for non-humans*

Interaction *subcategory examines perspectives that might mediate communication between humans and non-humans.*

Existential inquiry *subcategory involves perspectives for designing interventions that challenge or expand humans' understanding of themselves and non-humans as part of larger ecosystems.*

CARD DESIGNS

Each Shroom Card is designed as a small foldable booklet. Printable versions of the cards are available in this PDF from page 7 to 58. You can print these pages on A4 paper (double-sided, duplex on short edge) and cut them to make your own cards. Here, we detail the designs of the Role & Purpose, Empty Relationality, and Non-human cards.

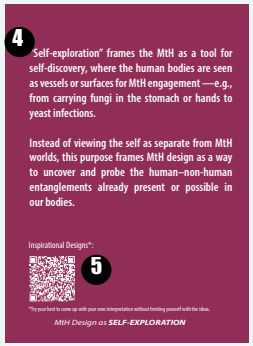


Role & Purpose Cards

Front

On the front, you'll find an ***(1) icon***, ***(2) short title*** and ***(3) short description*** that summarize a specific MTH design perspective.

Back



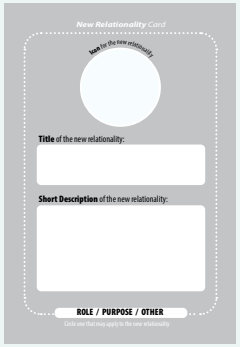
The back of the card includes a ***(4) detailed explanation*** of the perspective, as well as a ***(5) QR code*** that takes you to some inspirational ideas (one from our work and one from others') related to the card.

Inside

Inside, the card opens up to an ***(6) empty space***—inviting you to take notes, sketch ideas, or reflect on how the perspective could apply to your own design context.

Empty Relationality Cards

Front



Back

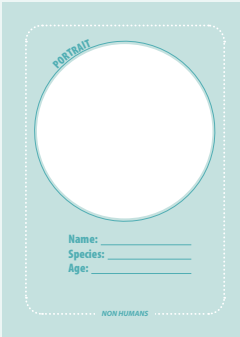
Inside

The design of the Empty Relationality Cards is the same as the Role & Purpose cards. Yet, instead of having predefined information, individuals are invited to fill in details such as a title, short and detailed descriptions, as well as choosing whether the new relationality could be considered a role/purpose or something that would not fit in these two categories. Finally, while filling in the Empty Relationality Cards, do not forget to sketch a design idea or mention your MtH encounters that led to the formulation of this relationality.

NonHuman Cards

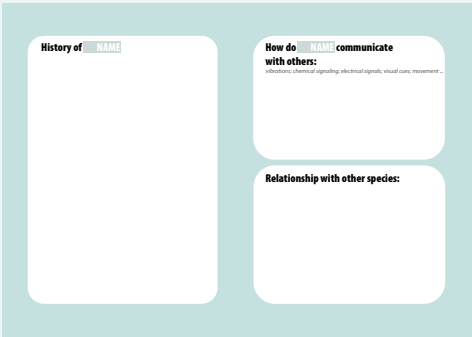
Non-human cards aim to make individuals think about the non-humans they're working with. It has prompts to facilitate your thinking, e.g., from ***names, species*** and ***histories*** to their ***impacts on***, ***relationalities***, and ***ways of communicating with*** their surroundings. Individuals can use these cards to detail their understanding of a particular non-human based on the experiences they've had with the non-human.

Front



Back

Inside



HOW TO USE THEM?

We encourage you to explore the cards however you feel like!

For example, you can use the cards for from ***creating new MtH design*** ideas in your brainstorming sessions to trying to ***reflect on your existing designs and/or your design experiences*** through the lenses of the cards. Or you can just simply ***contest them*** and ***create new relationality cards*** based on your MtH design practices.

To better facilitate the usage of them, however, we crafted three sets of playful activities on the following pages that you can try out! While **Playful Ideation** and **Reflection** activities are for short time engagement (approx. 1 hour), we suggest the activity of **Ideation & Reflection In-Situ** for longer engagements (e.g., workshops, design projects) when you have a little bit more time to spend with the non-humans you work with.

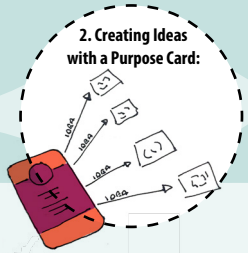
PLAYFUL IDEATION

Playful ideation is a short, structured session that you can have as a group of designers, or individually, to explore MtH designs in your design context. It requires you to define a **design context**, which might be a design brief or a theme. While a theme might be a simple direction for the design activity (e.g., designing a forest technology or a playful wearable), a design brief may be a detailed description of requirements.

Playful Activity:
IDEATION

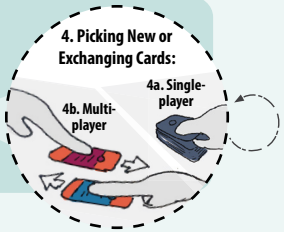
+1 Players + Design Theme or a Brief

Players use 'Non-human' cards to identify all the non-human actors that might exist in the context of the design theme or brief. A non-human actor can range from living actors such as bacteria, plants, and non-human animals to non-living actors such as artificial intelligence systems.



Each player picks a random 'Purpose' card, embodies its perspective, and generates as many ideas as possible for the design context by considering one of the non-humans, within 10 minutes.

Each player picks a random 'Role' card, combines it with the previously chosen 'Purpose' card, and generates additional ideas over the next 10 minutes.



This step can be done differently based on whether the activity is single or multiplayer: In a single-player setting (Step 4a), the player replaces one of their cards with a new one from the deck and continues generating ideas. In group settings (Step 4b), participants exchange one of their cards with each other and create more ideas. This step can be repeated as much as you want.

PLAYFUL REFLECTION

Playful reflection is a short, structured session that you can have as a group of designers, or individually, to reflect on existing designs or your experiences of designing with non-humans. It requires you to define a **design work**, which can vary from an idea or a sketch to a prototype or a process/method. It might be good if it's represented in the physical space where the activity is taking place; however, the fidelity of representation is not important.

Playful Activity:
REFLECTION

1-4 Players + a Design Work to Reflect on

The group/individual selects and familiarizes themselves with a design work to reflect on.

Player(s) use "non-human" cards to identify all the non-human actors that might exist in the context of the design theme or brief. A non-human actor can vary from living actors such as bacteria, plants and non-human animals to non-living actors such as Artificial Intelligence and the Internet of Things.

In a single-player activity, the player reviews all the cards.

In a multi-player activity, the deck is equally divided between players making sure that everyone has at least one role and multiple purpose cards.

In a single player activity, the player selects one Role and one Purpose cards that fit the design work the best. After doing so, the player skips the next step and switches to the step 6.

In a multiplayer setting, the players review the cards they have at hand and select two relationality cards (one from Roles and another from Purposes) they believe are embodied in the designwork and keep the cards they've selected for themselves at this stage and go to step 5.

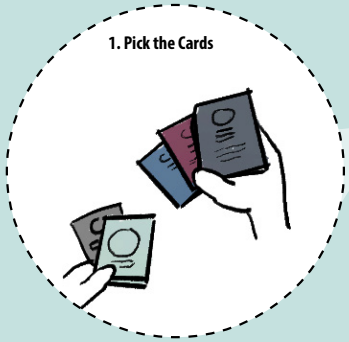
For the multiplayer activitiy, the chosen cards are shuffled and placed anonymously on the table grouping roles and purposes together. Each player votes for one purpose and one role card, considering their relevance to the design work. The player whose cards were voted the most wins the round.

The players think whether the chosen cards resonate well the the design work or there could be a new relationality card to better capture it. In a single player activity, the player does it themselves, whereas, in a multiplayer setting, it is collectively discussed. If the cards don't capture the relationalities in the design work, they create a new relationality card for the design work.

HOW TO USE THEM?

IDEATION & REFLECTION IN-SITU

1. Pick the Cards



Gather as a group. Everyone picks:

-"Role/Purpose" cards (1-3),

-"Non-human" card (at least 1)

- "Empty Relationality" card (at least 1)

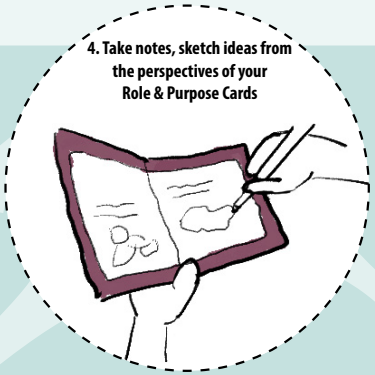
2. Situate yourself in your MtH design context

Situate yourself in your MtH design context (e.g., forests, parking lots, labs). Observe and interact (e.g., smell, touch) with non-humans around.

3. Focus on non-humans, get to know them better

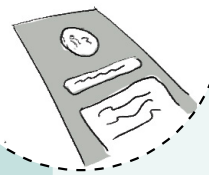
Choose at least one non-human and fill in Non-human cards to get to know them better.

4. Take notes, sketch ideas from the perspectives of your Role & Purpose Cards



Use Role and Purpose cards to sketch design ideas and take notes from the perspectives that these cards illustrates. Feel free to use your words, lines, things that you found.

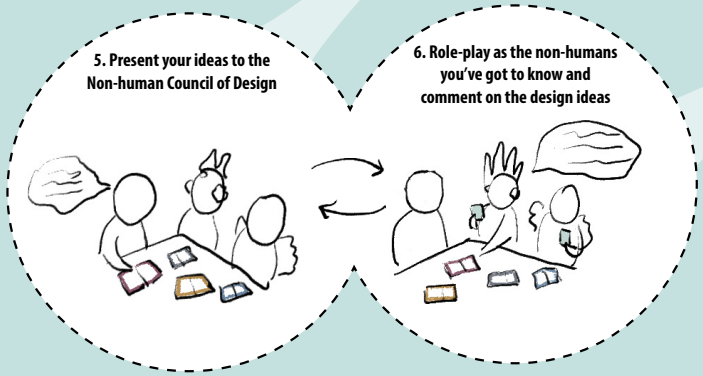
Creating a New Relationality Card
(whenever you feel the need)



If, at any point in the process, you feel that the Role and Purpose cards are not enough to describe what you've experienced, come up with a new Relationality by using Empty Relationality cards.

5. Present your ideas to the Non-human Council of Design

6. Role-play as the non-humans you've got to know and comment on the design ideas



Come together with others in a **Non-Human Council of Design**. In the council, everyone takes their turn to present the ideas on the cards while others role-play as their non-human character to comment:

How do the ideas make you, as non-human, feel? How do you feel about the roles and purposes of this design?

Playful Activity:

IDEATION & REFLECTION IN-SITU

2-5 Players + Design Theme or a Brief

Ideation & Reflection In-Situ is a relatively longer set of activities (e.g., suitable for workshops or longer design projects) to explore and reflect on MtH design ideas by **spending more time with non-humans** that you might work with in your design processes. It is best done in groups, and, similar to Playful Ideation, it is good to have a design theme or a brief in mind before starting the activities. However, it can also be done in a more open-ended manner.

The following pages of this PDF contain the printable cards.

Each card is shown with its front side first, followed by its back side on the next page.
You can print these pages on A4 by using both sides of the papers (flip on short edges).

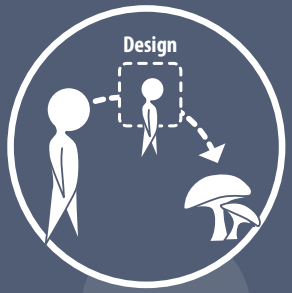
This role attempts to transform the dominant human-centered power relations that see non-humans as resources for humans.

From this perspective, MtH design would instead frame human bodies and minds as sites of entanglement that can provide resources for non-human well-being (e.g., cultivating fungi on our skin, offering bodies to fertilize soil).

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

HUMANS AS MATERIALS



HUMANS AS MATERIALS

Human bodies and minds are seen as passive resources to serve the needs of non-humans in design.

ROLEs in Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

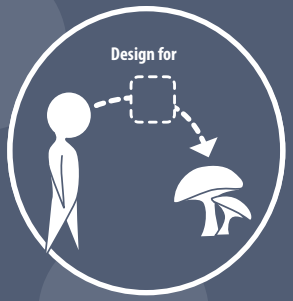
This role emphasises MtH designs that helps with the needs of the non-humans (e.g., designing shelters for non-human animals).

However, it brings in the assumption that "we know what non-humans need," which requires a humble stance, an awareness that we estimate, rather than know them. Thus, considering non-humans as users calls for a responsible trial and error, as well as a constant reflection of the designers' decisions in relation to non-humans.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

NON-HUMANS AS USER



NON-HUMANS AS USERS

Designers focus on understanding the needs of the non-humans and helping them nurture through designs.

ROLEs in Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

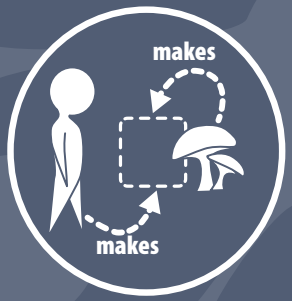
This role frames non-humans as active actors (e.g., with their breakage, the way that mushrooms grow, change, and influence) in the design process together with humans.

This role pursues a curious exploration about how we, as humans, can actively relate to non-humans through discovering our entangled influences in design and giving more space for non-humans to lead the designs.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

NON-HUMANS AS CO-MAKERS



NON-HUMANS AS CO-MAKERS

Non-humans are considered collaborators in the design activity by taking an active part in the design process together with humans.

ROLEs in Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

This role is rather an extreme end of leaving a space for non-human agency in design processes to a point where humans reduce their role to observers.

This is similar to the concept of biomimicry in design, drawing design inspiration from nature's forms, processes, and systems, yet in MtH design contexts, considering non-humans as sole designers differs from this concept in a way that it does not necessarily aim to utilise the design knowledge for creating more designs. This role is rather an attempt to understand the ways of non-humans.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

NON-HUMANS AS SOLE DESIGNERS

NON-HUMANS AS SOLE DESIGNERS

Non-humans are considered designers without the involvement of humans. Humans observe non-humans, without intervening, to formulate design insights together with non-humans.

ROLEs in Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

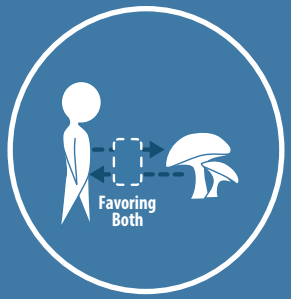
This purpose is about embracing a perspective towards supporting the survival of both humans and non-humans, either by catering to the needs of both directly or by helping humans to be aware of the importance of caring for non-humans alongside humans.

Having this purpose, MtH design envisions tools and systems that foster practices to be aware of and act on our collective existences in MtH worlds (e.g., how we live and thrive together with plants, or non-human animals), negotiating the needs of both humans and non-humans.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***COLLECTIVE SURVIVAL***



MtH Design as

COLLECTIVE SURVIVAL

Designs try to ensure collective survival, benefiting both humans and non-humans.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

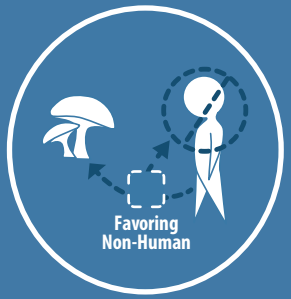
"Activism" frames design as advocating for MtH survival, even at the expense of humans.

This purpose draws parallels with sustainability approaches where humans are made uncomfortable for realising how we depend on non-human actors in our existence. It positions design as advocacy, using material encounters (e.g., feeding mosquitos, expanding yeast infections) to provoke reflection or unease for the sake of non-human survival.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***ACTIVISM***



MtH Design as

ACTIVISM

Designs aim to support the survival of non-humans, even if it means that humans might not thrive.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Pacifism" embraces a "live and let others live" ethos, where designers step back to avoid imposing on non-humans and let them exist on their own terms.

MtH pacifism doesn't mean avoiding design altogether. It can include observing and engaging with non-humans, but from this perspective, one might choose not to create new interventions, valuing the importance of leaving non-human processes undisturbed.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

*MtH Design as **PACIFISM***

MtH Design as

PACIFISM

Humans refuse to design, staying aside from making any impact on non-humans, by articulating why the design is not necessary.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Pursuing Collective Experiences" aims to facilitate shared, co-constituted experiences between humans and non-humans.

This purpose emphasizes shared experiences—like playing with non-humans or relating through joy—rather than focusing only on survival. However, it also assumes that non-humans experience these moments as we do. MtH design should therefore question assumptions, such as the idea that cats enjoy playing with humans.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***PURSUING COLLECTIVE EXPERIENCES***

MtH Design as

PURSUING COLLECTIVE EXPERIENCES

Designs promote a shared positive experience between humans and non-human entities

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Serving Non-human Experiences" centers design as creating "favorable" experiences for non-humans.

With this purpose, MtH designs might aim to create things we think favorable for non-humans, like toys for non-human animals. This shifts attention away from humans and toward non-human experiences, but the evaluation still depends on human observation. In the end, claims about making non-human experiences "joyful" or "playful" remain uncertain.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***SERVING NON-HUMAN EXPERIENCES***

Providing an Experience for Non-humans

MtH Design as

SERVING NON-HUMAN EXPERIENCES

Humans act as a curious facilitaters for creating pleasant experiences for non-humans that do not involve humans.

PURPOSESs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Exposing" aims to lessen human agency by foregrounding non-human influence.

This purpose focuses on experiences that diminish human dominance, allowing non-human agencies to take the lead in shaping experiences. By intentionally limiting human agency (e.g., through letting bacteria decide the temperature of a room or fungi creating a feeling of itching on skin), "exposing" destabilizes human control and prompts reflection on entangled human–non-human relations.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***EXPOSING***

MtH Design as

EXPOSING

Designs intentionally reduce human control through designs and allow non-humans to define the experience.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Humanising Non-human" frames design through anthropomorphism, aiming to foster empathy by translating non-human signals into human modes of communication (e.g., assigning verbal, human-like features to non-humans).

However, this approach can oversimplify or misrepresent non-human agencies by centering human perception. MtH design must recognize this tension: it can make non-humans more relatable while also erasing their unique ways of being, raising important ethical concerns about anthropocentric bias in design.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***HUMANISING NON-HUMANS***

MtH Design as

HUMANISING NON-HUMANS

Designs traslates non-human activity into have human-like features.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Non-humanising Human" invites humans to take on non-human modalities, expanding our perception to align with non-human temporalities and ways of being.

This often relies on technological mediation to make otherwise unnoticeable activities observable (for example, translating the electrical pulses of mushrooms into sensations humans can feel). However, such reliance on technology risks oversimplifying non-human complexity and limiting opportunities for deeper, more direct intra-actions.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***NON-HUMANISING HUMANS***

MtH Design as

NON-HUMANISING HUMANS

Designs adorns humans with designs to perceive non-human activities.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

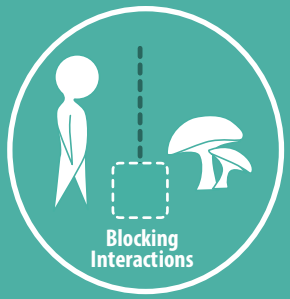
"Disconnecting" seeks to block encounters between humans and non-humans through designs (e.g., blocking the visibility of mushrooms to human eye).

This purpose reflects a pessimism toward human impact and suggesting non-humans may thrive better out of human reach. By actively limiting engagement, this purpose reframes agency as resistance, acknowledging that not all MtH encounters are desirable.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***DISCONNECTING***



MtH Design as

DISCONNECTING

Designs aim to obstruct interactions between humans and non-humans for preventing potential harm humans may cause to non-humans.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Self-exploration" frames the MtH as a tool for self-discovery, where the human bodies are seen as vessels or surfaces for MtH engagement —e.g., from carrying fungi in the stomach or hands to yeast infections.

Instead of viewing the self as separate from MtH worlds, this purpose frames MtH design as a way to uncover and probe the human–non-human entanglements already present or possible in our bodies.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

*MtH Design as **SELF-EXPLORATION***

Letting Humans Explore Themselves through Non-Humans

MtH Design as

SELF-EXPLORATION

Designs as tools for self-discovery, exploring humans' connection with the non-humans.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Deconstruction" focuses on recognizing and revelaing that humans and non-humans as interconnected lifeforms within shared socioecological systems.

MtH design in this mode questions the boundaries between humans and non-humans, often through surreal acts of deconstruction. For instance, it might explore how "living" depends on our relations with bacteria, bees, or mushrooms—and invite us to imagine what life would look like without these relations.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***DECONSTRUCTION***

Letting Humans Explore Their Interconnectedness to Non-Humans

MtH Design as

DECONSTRUCTION

Designs make humans see themselves and non-humans as interconnected beings within socio-ecological systems.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.

"Approximation" seeks to connect with non-humans by adopting their ways of being, such as perceptions of time, space, and activity.

This purpose assumes that we cannot fully understand but estimate the perspectives of non-humans. To facilitate this, MtH design could encourage role-play, mimicry, or simulation to experience non-human perspectives.

Inspirational Designs*:

*Try your best to come up with your own interpretation without limiting yourself with the ideas.

MtH Design as ***APPROXIMATION***

Letting Humans Experience Non-Human Ways of Being

MtH Design as

APPROXIMATION

Designs aim to help humans experience non-human perspectives by designing tools that encourage role-play, mimicry, or simulation.

PURPOSEs of Design

You can note down your experiences with **non-humans**, **thoughts** and **design ideas** about this relationality.
